Q.4   Algorithm A is plain minimax Search
  a.   B is also plain minimax
        Yes, A always follow best possible strategy
  b   provided A starts first.

  b. Algo A, Minimax is the optimal and complete algorithm
     it always follows the best possibly strategy.
     So, its not possible to make an algorithm for which
     A does not follow best possible strategy.
